- Do not inhale gases / fumes / aerosols.

Respiratory protection:

- Ensure good ventilation.
- In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use self-contained respiratory protective device.

Protection of hands:

- Preventive skin protection by use of skin-protecting agents is recommended.

Protective gloves

After use of gloves apply skin-cleaning agents and skin cosmetics.
Prior to each use check that protective gloves are in good condition.
The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Selection of the glove material on consideration of penetration times, rates of diffusion and degradation. Due to missing tests no recommendation to the glove material can be given for the product/ preparation/ chemical mixture.

Material of gloves

The selection of suitable gloves does not only depend on the material, but also on quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application. Protective gloves to comply with EN 374. Suitable material: nitrile.

Penetration time of glove material

Our recommendation is mainly for a one-time use as short-term protection against liquid splashes. For other applications, you should contact a glove manufacturer.

The exact break through time must be found out from the manufacturer of the protective gloves and must be observed.

For permanent contact in work areas without heightened risk of injury (e.g. Laboratory), gloves made of the following material are suitable:

Butyl rubber, BR

For permanent contact, gloves made of the following materials are suitable: Butyl rubber, BR

Gloves made from the following material are not suitable: Leather
